Re: Walnut Street Resurfacing

Pavement Solutions, Inc., Middletown, Indiana has been contracted to resurface Walnut Street from SR 67 to SR 32. Walnut Street will be resurfaced with Microsurface. This is a thin, tough, durable liquid asphalt and crushed aggregate overlay that will give the street a uniform texture and riding surface while it protects the existing pavement. It is the same pavement surface that is currently on Walnut Street.

The project, weather permitting, will take 2 days to complete. The current schedule is for the leveling course to be placed on Thursday July 30; with the surface course applied Friday July 31.

Microsurface is applied as a semi-liquid mixture and requires approximately 1 hour before traffic is allowed to travel on the new surface. After several minutes, flaggers will be able to direct vehicles to cross over the new material from one side of an intersection to the other side.

For those residents that live on the east side of Walnut Street (2nd Street, 4th Street, 6th Street, and Bronco Drive) we will maintain an Entrance/Exit point at 4th Street and Walnut. Our Flagger will be able to direct you straight across to the west side of 4th Street. Please exit and enter from this vantage point during the resurfacing process.

We ask that any residents that wish to visit the Water Park/Park please enter/exit from the South entrance on 3rd Street.

Residents that live on Walnut Street needing to use their vehicles, we ask, if possible, that you park your vehicle on a side street on the west side of Walnut. For residents that live in the areas off Daleville Road we ask that you travel to and from the east of town or via Tennessee Street to/from SR 32.

We intend to limit vehicle travel on Walnut Street in one direction. This will change depending on which travel lane is being resurfaced at that time. Always confirm the direction of travel before entering Walnut Street. If possible, please find alternate routes.

We want to thank you for your patience during the resurfacing process. Weather and equipment permitting we will complete the project as quickly, efficiently, and safely as possible.
